The can clip comes with a strong, sharp clip that keeps the can on your car window. The can clip is designed to work great with the picture or memo on the glass. This is a unique product you can only find at Clipless! Need to keep your rental past your due date? At any time before your due date you can extend or purchase your rental through your account. Rental Returns & Exchanges Buyers can return or exchange a rental within 30 days of the purchase date. An exchange fee of \$10 will be charged for the first rental and \$20 for each additional rental returned. All Buyers Responsible It is the sole responsibility of the buyer to rent, purchase and pay for the products listed on Wrights.com. Wright requires you to check the availability of the product prior to the rental/purchase. Buyers are fully responsible for all applicable US, state and local taxes, fees, rules and regulations. We reserve the right to verify information and lease terms on our own or on behalf of our guests. Dual-color spectrofluorometric assay for measuring DNA lesion topoisomerase I activity. The use of dual-color spectrofluorometric assay (D-COASA) to measure topoisomerase I (top1)-DNA cleavage and religation activity is described. The two-color format is highly sensitive because it allows simultaneous measurement of two fluorescence intensities (FI) from each sample. The two FIs are generated by using two different wavelengths of excitation, one to excite the donor fluorophore and another to excite the acceptor fluorophore. Because the two FIs are from the same sample, signal fluctuation can be excluded. A simple way of measuring FI-1 and FI-2 is used to calculate the cleavage and religation activities of top1. The D-COASA method is capable of detecting top1-DNA cleavage and religation activity in the presence of supercoiled plasmid DNA with a 10-fold linear range in enzyme concentration. The detection limit for the cleavage activity is approximately 0.2 U/mg protein, which is approximately 50 times lower than the minimum detectable activity reported for the regular spectrofluorometric assay. D-COASA is also useful in the detection of top1 inhibitors. Not everyone is surprised the FCA isn't embracing the idea of driverless cars. 82157476af
